#### Description of the course

The course deals with the basics of the archaeology as a scientific field in the domain of humanities. Through the most significant examples, it explains the history and development of the archaeological thought, and the shaping of the archaeological science. It deals with the basic terminology, principles and methods needed for the archaeological research. The students learn about the types, origin and formation processes of the archaeological records, about the basic methodology of theoretical and practical work, and about the dating issues.

#### Learning outcomes of the course

Students will:
- acquire the general knowledge on archaeology as a science;
- will know the history of archaeology, and the archaeological thought;
- will be introduced to the methodology of the archaeological research;
- will dispose of the basic archaeological vocabulary;
- will be able to explain the basic principles of archaeology.
