

SHORT BIO:

Francesca Franzon got her MS and PhD in Linguistics at the University of Padova, Italy, and is currently working at the International School for advanced studies (SISSA) in Trieste. She's been mostly working on Number and Gender morphology, and explored connections between this and core cognitive abilities.

Her research interest is in understanding the role of the statistical patterns in language use, as well as the role of cognitive extra-linguistic factors in shaping morphological systems and in the processing of morphology.
