2. COURSE DESCRIPTION			
2.1.Course objectives and short contents	Language policy consists of three inter-related but independent components: (1) actual practice, (2) beliefs and values, and (3) language management (Spolsky 2004). The main objective of this course is to provide a short overview of different models of language policy and planning and its relation to language management. The students will get an insight into economic, legal and political aspects of language management. The bulk of the course will focus on presenting and discussing various facets of language management in a variety of (multilingual) institutional contexts at micro- and macro-levels of society. A small-scale original research in a specific institutional setting will serve as an incentive for the formulation of effective practical recommendations for policy in specific settings.

2.1.Course objectives and short contents	The course looks into various interconnections between processes of globalization and languages. We will explore how globalization affects languages and, vice versa, the role of languages in globalizing processes. In these processes language(s) may be perceived as different types of resources, but we will be especially concerned here with language and multilingualism in particular as an economic resource in a globalizing world. The course will aim at a broad geographical coverage of relevant issues. The semester-long project work based on weekly assignments will complement the course with a range of real-life inputs to discuss the topics of interest.
